Art Unit: 3712

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Douglas in view of Johnson. Douglas discloses most of the elements of the claims (note especially the Fig 5 embodiment), including the well known folding of the insert, but does not disclose sizing of the housing relative to the insert such that the insert is frictionally held within the housing. Johnson shows that the missing element is conventional (note first column at bottom thereof). It would have been obvious in view of Johnson to size the insert of Douglas relative to the housing thereof (whether or not the insert was also folded), in order to provide a more simple and economical method of retaining the insert within the housing.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 10-12 and 14-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson. None of the rejected claims requires folding of the insert. Johnson is considered to clearly teach that flaps having portions 3 and 4 for retaining an insert within a housing may (but do not have to be) be omitted by diminishing the sliding clearance between the insert and the housing. Thus Johnson teaches that a friction fit may be used by itself or together with the

Art Unit: 3712

forementioned flaps to retain an insert within a housing. When one of the flaps is open and the other closed (as shown in Figs 1 and 2) the housing of Johnson has a closed end and an open end.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim is indefinite because the phrase "the member" therein appears to lack antecedent basis.
